

VAREX IMAGING

in collaboration with

VERGINIA SRL

As the official distributor of Varex Imaging in Romania and the Republic of Moldova, VERGINIA SRL provides a comprehensive range of cutting-edge medical X-ray tubes and imaging solutions to healthcare facilities throughout the region.

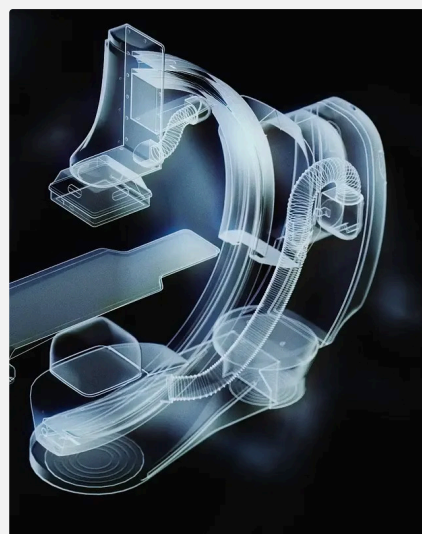

For 75 years, Varex Imaging Corporation has pioneered X-ray imaging innovation, consistently fulfilling its mission of "Making the Invisible Visible™."

Advancing X-ray Technology for 75 Years

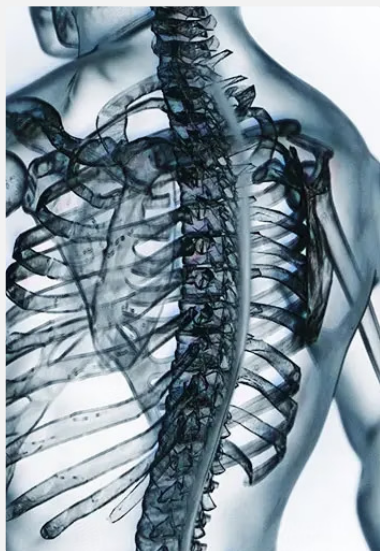

As a leading independent supplier of medical X-ray tubes and advanced image processing solutions, Varex partners with Original Equipment Manufacturers (OEMs) globally to develop high-performance components that power sophisticated imaging systems. These precision-engineered technologies serve vital functions across medical diagnostics, veterinary care, security screening, and industrial inspection applications, enhancing millions of lives daily through improved diagnostic accuracy, treatment planning, and safety measures.

Industry Leadership

Varex maintains market leadership through innovation and strategic partnerships. Their product portfolio includes advanced Lumen HD and Lumen HD Pro radiography detectors designed for evolving imaging needs. The company's development of Accelerator Beam Centerlines (ABC) and High Energy Sources (HES) represents significant advancements in imaging technology.

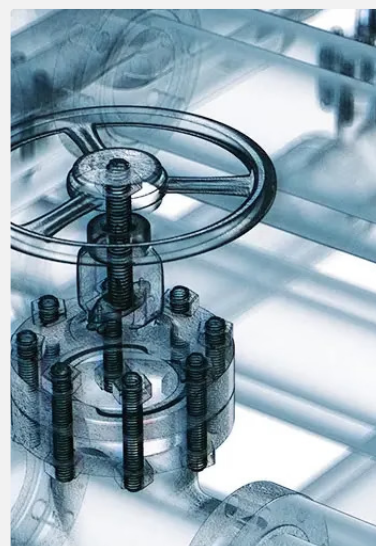

Medical & Veterinary Solutions

Varex partners with medical, dental, and veterinary Original Equipment Manufacturers (OEM) to accelerate their product development cycles using advanced imaging components and technology. The company's solutions enable healthcare providers to deliver more accurate diagnoses through superior image quality, optimized radiation doses, and improved workflow efficiency. Varex's components are found in a wide range of medical imaging equipment, including CT scanners, fluoroscopy systems, mammography units, and dental imaging devices.

Security & Industrial Applications

In the security sector, Varex provides essential imaging components for airport screening systems, cargo inspection equipment, and other security applications. These solutions help protect critical infrastructure and facilitate safe international trade. The industrial segment benefits from Varex's specialized imaging technology for non-destructive testing, quality control, and process monitoring across manufacturing, energy, and aerospace industries.

Innovation Focus

Varex maintains a dedicated innovation space where future generations of X-ray imaging products, concepts, and technologies are explored and developed. This commitment to research and development ensures the company stays at the cutting edge of imaging technology, continuously improving image quality, reducing radiation doses, and expanding application possibilities across all market segments.
